Dr. Jane Henney

I cannot believe that I cannot know what food I am putting into my body because of lack-of labels. ~~It is preposterous that mothers will~~ not know what they are feeding babies.

Are you all stupid?

Do you think we will put up with this?

I think you all are in for a big surprise.

Large corporations will begin to lose money when people begin to shop at "healthfood" stores in the hopes of getting pure food.

I just don't understand how you can cave in to the conglomerates. How can Europe and other countries have non-GE food and we can't know what we're getting in the US?

Please do the right thing and let consumers know what they're getting. Where is Ralph Nader when we need him?

I would love to know your rationale for lack of information in food labelling. Please educate me. I guess I'm uninformed.

what's important to you right now genetically modified foods & our food supply

If ever consumers needed to bond together, it's right now. As we speak, GMO (genetically modified organisms) also called GE's (genetically engineered) foods are sneaking their way into our food supply.

GE foods are unlabeled and mixed in with non-GE foods, and in a few years may comprise virtually the entire food supply.

Adding to the problem, the FDA does not allow non-GE foods to be

labeled as non-GE.

GE foods may cause unexpected and toxic reactions. And their long-term effect still remains unknown to scientists.

The United States had fallen behind Europe in the crusade to stop GE foods. The EEU has already declared a three year moratorium on GE foods in Europe and many US corporations have already prohibited the use of GE foods sold in Europe, Mexico and Japan, but not in the United States.

Do you want to get involved? Start by insisting on *organic produce* and foods when ever possible.

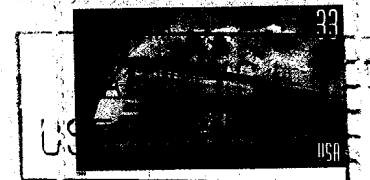

Next, demand the labeling of foods seeds and fiber products. Write to Dr. Jane Henney of the FDA at HF-1, 5600 Fishers Lane, Rockville, MD 20807
